

SUB-CONTRACTOR OF THE YEAR

Winner: Hydroserv

Hydroserv is a specialist in water engineering which was founded in Doha where it still maintains its headquarters.

Health, safety and the protection of the environment are at the forefront of every project the company undertakes and the firm is looking to upskill an already talented and committed workforce. Each month its core values are reinforced with the presentation of

awards to health and safety employee of the month and environmental employee of the month

Efficiency and the saving of both time and money for clients are its principal goals and a key example of this is the use of high-density polyethylene (HDP) pipework for all its pumping systems and dewatering installations. This significantly reduces the number of booster pumps

necessary thus saving on pump rental charges, diesel consumption and site supervision.

Tom Doyle, managing director of Hydroserv, said: "It's a great honour. In our industry we have to fight and battle, but we do always try to give our customers the best we can. So it's nice to win an award, and thanks to Construction Week Qatar for organising this event."
